

## **Male Inguinal Contents Program Transcript**

This is a dissection of the male inguinal region showing all inguinal ligaments and the superficial inguinal ring which is the outer opening of the inguinal canal. In the male structures that pass through the inguinal canal are the spermatic cord, which contains the testicular artery in vein, the vas deferens, the genital branch of the genitofemoral nerve, and also the ilioinguinal nerve. In the female, the inguinal canal contains the round ligament of the uterus, the genital branch of the genitofemoral nerve, and the ilioinguinal nerve.
