

## **Pelvic Nerves Program Transcript**

This is a table showing the nerves of the lumbar and sacral plexuses. For each nerve, the spinal cord level is given and the motor and sensory innervations shown. Of all these nerves, only the iliohypogastric nerve from the lumbar plexus is not found lying somewhere in the pelvis. Because there are so many nerves in the pelvis, any inflammation or damage or trauma to the pelvis can affect any of these nerves, thus making the diagnosis and treatment of pelvic problems very challenging.
