

## **LE Injury Ankle Foot Program Transcript**

This table shows the motor and sensory effects in the foot when there is damage to the tibial nerve at the ankle; superficial nerve and deep fibular nerve at the ankle; and the medial and lateral plantar nerves. Compare the motor and sensory effects of an injury to the tibial nerve at the ankle and the medial and lateral plantar nerve injuries in the foot. Also, compare the sensory effects of an injury to the superficial and deep fibular nerves at the ankle.
